Subject: DuSable Park - Rad Spot Location Request

Hi Vernetta:

Per your request, I have attached a sketch with the approximate locations of the areas where slightly elevated gamma readings were observed. These areas are all very small (a few feet square each) and have gamma readings that are only slightly above the Ludlum meter threshold (< 22,000 cpm versus a meter threshold of 18,740 cpm).

Please feel free to contact me if you have any other questions.

Sincerely,

*Steve Kornder*
